

## Assignment -4

|                     |   |
|---------------------|---|
| Student Name        | RAVINESAN M                                       |
| Student Roll Number | 810419106048                                      |
| Project Name        | IOT Based Gas leakage monitoring and alert system |

### Question-1:

Write code and connections in wokwi for the ultrasonic sensor. Whenever the distance is less than 100 cms send an "alert" to the IBM cloud and display in the device recent events. Upload document with wokwi share link and images of IBM cloud

### CODE 1 :

```
#include <WiFi.h> #include
<PubSubClient.h>

void callback(char* subscribetopic, byte* payload, unsigned int payloadLength); #define ORG
"92zbfc"
#define DEVICE_TYPE "esp32"
#define DEVICE_ID "12345"
#define TOKEN "12345678"
String data3;
char server[] = ORG ".messaging.internetofthings.ibmcloud.com"; char
publishTopic[] = "iot-2/evt/Data/fmt/json";
char subscribetopic[] = "iot-2/cmd/test/fmt/String"; char
authMethod[] = "use-token-auth";
char token[] = TOKEN;
char clientId[] = "d:" ORG ":" DEVICE_TYPE ":" DEVICE_ID;
WiFiClient wifiClient;
PubSubClient client(server, 1883, callback, wifiClient); const int
trigPin = 5;
const int echoPin = 18;
#define SOUND_SPEED 0.034
long duration;
float distance;
void setup() {
  Serial.begin(115200);
  pinMode(trigPin, OUTPUT);
  pinMode(echoPin, INPUT);
  wifiConnect(); mqttConnect();
}
void loop()
{
  digitalWrite(trigPin, LOW);
  delayMicroseconds(2); digitalWrite(trigPin,
HIGH); delayMicroseconds(10);
  digitalWrite(trigPin, LOW); duration =
  pulseIn(echoPin, HIGH); distance =
  duration * SOUND_SPEED/2;
  Serial.print("Distance (cm): ");
  Serial.println(distance); if(distance<100)
  {
    Serial.println("ALERT!!");
    delay(1000);
    PublishData(distance);
```

```

delay(1000);
if (!client.loop())
{mqttconnect();
}
}
delay(1000);
}
void PublishData(float dist)
{mqttconnect();
String payload = "{\"Distance\":";payload
+= dist;
payload += ",\"ALERT!!\":\"\";\"Distance less than 100cms\"";payload +=
"}";
Serial.print("Sending payload: ");
Serial.println(payload);

if (client.publish(publishTopic, (char*) payload.c_str())) {
Serial.println("Publish ok");
} else {
Serial.println("Publish failed");
}
}
}
void mqttconnect() {
if (!client.connected())
{ Serial.print("Reconnecting client to ");
Serial.println(server);
while (!client.connect(clientId, authMethod, token)) {
Serial.print(".");
delay(500);
}
initManagedDevice();
Serial.println();
}
}
void wificonnect()
{
Serial.println(); Serial.print("Connecting to ");
WiFi.begin("Wokwi-GUEST", "", 6); while
(WiFi.status() != WL_CONNECTED) {delay(500);
Serial.print(".");
}
Serial.println(""); Serial.println("WiFi
connected");Serial.println("IP address:
"); Serial.println(WiFi.localIP());
}
void initManagedDevice() {
if (client.subscribe(subscribetopic))
{Serial.println((subscribetopic));
Serial.println("subscribe to cmd OK");
} else {
Serial.println("subscribe to cmd FAILED");
}
}
}
void callback(char* subscribetopic, byte* payload, unsigned int payloadLength)
{
Serial.print("callback invoked for topic: ");
Serial.println(subscribetopic);
for (int i = 0; i < payloadLength; i++)
{
data3 += (char)payload[i];
}
Serial.println("data: " + data3);
data3="";
}
}

```

Wokwi Link :

## Output and Simulation :

The screenshot shows the Wokwi web interface with a sketch loaded. The sketch code is as follows:

```
1 #include <WiFi.h>
2 #include <PubSubClient.h>
3 void callback(char* topic, byte* payload, unsigned int payloadLength);
4 #define ORG "92zbfc"
5 #define DEVICE_TYPE "esp32"
6 #define DEVICE_ID "12345"
7 #define TOKEN "12345678"
8 String data3;
9 char server[] = ORG ".messaging.internetofthings.ibmcloud.com";
10 char publishTopic[] = "iot-2/evt/Data/fmt/json";
11 char subscribTopic[] = "iot-2/cmd/test/fmt/string";
12 char authMethod[] = "use-token-auth";
13 char token[] = TOKEN;
14 char clientId[] = "d:" ORG ":" DEVICE_TYPE ":" DEVICE_ID;
15 WiFiClient wificlient;
16 PubSubClient client(server, 1883, callback, wificlient);
17 const int trigPin = 5;
18 const int echoPin = 18;
19 #define SOUND_SPEED 0.034
20 long duration;
21 float distance;
22 void setup() {
23   Serial.begin(115200);
24   pinMode(trigPin, OUTPUT);
25   pinMode(echoPin, INPUT);
26   wificlient.connect();
27   mqttconnect();
28 }
29 void loop() {
30   {
31     digitalWrite(trigPin, LOW);
32     delayMicroseconds(2);
33     digitalWrite(trigPin, HIGH);
34     delayMicroseconds(10);
```

The simulation window shows the ESP32 and HC-SR04 sensor connected. The console output shows two 'ALERT!!' messages triggered by distance readings of 72.96 cm, which are less than the 100 cm threshold.

Whenever the distance is less than 100 cms send an "alert" to the IBM cloud and display in the device recent events.

The screenshot shows the IBM Watson IoT Platform dashboard. The 'Recent Events' tab is selected for device 12345. The events list shows three entries with the payload `{"Distance":72.96,"ALERT!!":"Distance less than 100cms"}`.

| Event | Value   | Format | Last Received     |
|-------|---|--------|-------------------|
| Data  | <code>{"Distance":72.96,"ALERT!!":"Distance less than 100cms"}</code> | json   | a few seconds ago |
| Data  | <code>{"Distance":72.96,"ALERT!!":"Distance less than 100cms"}</code> | json   | a few seconds ago |
| Data  | <code>{"Distance":72.96,"ALERT!!":"Distance less than 100cms"}</code> | json   | a few seconds ago |
